Art Unit: 1614

Claims 1-8 and 17-30 are presented for examination.

The response to the restriction requirement of October 23, 2002 has been received and entered.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-8 and 17-30 rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for certain disorders associated with amyloid protein deposit, does not reasonably provide enablement for the broad phrase of amyloidosis. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to use the invention commensurate in scope with these claims. The instant specification fails to provide information that would allow the skilled artisan to practice the instant invention without undue experimentation. Attention is directed to *In re Wands*, 8 USPQ2d 1400 (CAFC 1988) At 1404 where the court set forth eight factors to consider when assessing if a disclosure would have required undue experimentation. Citing *Ex Parte Forman*, 230 USPQ 546 (BdApls 1986) at 547 the court recited eight factors:

- 1) the quantity of experimentation necessary,
- 2) the amount of direction or guidance provided,
- 3) the presence or absence of working examples,
- 4) the nature of the invention,
- 5) the state of the prior art,

Art Unit: 1614

- 6) the relative skill of those in the art,
- 7) the predictability of the art, and
- 8) the breadth of the claims.

Applicant fails to set forth the criteria that define "amyloidosis". Additionally, applicant fails to provide information allowing the skilled artisan to ascertain the conditions associated with "amyloidosis". In the instant case only a limited number of conditions associated with amyloidosis are set forth, therefore fails to provide sufficient working examples. The instant specification also fails to support the treatment of Alzheimer. The pharmaceutical art is unpredictable, requiring each embodiment to be individually assessed for physiological activity. The instant claims read on all conditions covered under the broad phrase of "amyloidosis", necessitating an exhaustive search for the embodiment suitable to practice the instant invention. Applicant fails to provide information sufficient to practice the claimed invention, absent undue experimentation.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 6-8 are rejected under 35 U.S.C. 102 (b) as being anticipated by Sawruk (U.S. Patent 5,478,579). Sawruk teaches the use of the claimed compound, myricetin in a pharmaceutical formulation for the treatment of osteoporosis. The above reference makes clear that the claimed composition is old and well known. The use of an old composition for a new purpose does not create a patentably distinct composition.
